

QUICK GUIDE TO VINYL INSTALLATION

Suggested Installation Supplies-

Tape Measure • Glass Cleaner • Paper Towels
Application Squeegee • Hobby Knife or Razor Blade

Surface must be warm and clean to adhere properly. Clean the area where the vinyl is going to be installed using a quality glass cleaner or solvent, removing all surface impurities. Use a paper towel to remove residue.

Position the graphic using a tape measure or a level. Use small masking tape pieces to position the material. Place a longer piece of tape down the center of graphic for easier application.

Applying the vinyl in smaller parts is easier and helps prevent wrinkles. Lift the side to be applied, while holding the graphic away from the surface, use the knife to cut off the backing material. Although not necessary in most cases, a surface misting with application fluid is helpful with large graphics.

Holding the graphic tight and slightly above the surface, use the squeegee to apply the vinyl. Work from the center out using firm, smooth strokes across the entire graphic.

Remove the backing paper from other side and repeat the squeegee application process. Make sure to work continuously to the end. Bubbles, loose spots or ridges may appear if areas are not squeegeed down completely.

Remove the top liner by pulling at a 45 degree angle. Water can be used on paper-based liners to facilitate removal (if necessary). Air bubbles can be popped using the knife point. In time, vinyl graphics tend to smooth out on their own.
